MannMitra - Lean Canvas

Voice-first AI agent for early mental distress check-ins and referral
SDG 3 | IBM SkillsBuild - AICTE - BharatCares (CSRBOX) ML & Applied AI Internship 2026

1. PROBLEM

- Informal workers (riders, domestic, construction, shop workers) carry high stress and anxiety with no HR or wellness support.
- About 80% treatment gap for common mental disorders (NMHS 2015-16); most never make first contact.
- Apps assume English, text, a smartphone-fluent user and privacy; stigma and long hours block help-seeking.

2. SOLUTION

- Weekly 3-5 min voice check-in in the worker's language (call, voice note or web).
- PHQ-9 / GAD-7 style screening, asked conversationally.
- Tiers: Green (tips), Amber (guided coping + nudge), Red (warm handoff to 14416).
- RAG-grounded guidance; multi-agent safety layer.

3. KEY METRICS

- Weekly check-in completion; 4-week retention
- Crisis-detection recall (priority metric)
- % of Amber/Red users who accept a referral
- Languages covered; speech accuracy
- NGO/CSR partners onboarded

4. UNIQUE VALUE PROPOSITION

- A friendly check-in in your own language, by voice - no typing, no forms, no judgment.
- Spots early distress and connects you to a real human counsellor before it becomes a crisis.
- Gives NGOs and CSR partners anonymized wellbeing trends to plan support.

5. UNFAIR ADVANTAGE

- Voice-first, multilingual design for low-literacy users.
- Safety-first rule layer + professionally reviewed content.
- NGO/CSR trust and community partnerships (built over time).
- Anonymized longitudinal data for partners.

6. CHANNELS

- NGO and CSR partners; worker unions; gig-platform partners
- Community health workers (ASHA, anganwadi)
- WhatsApp voice notes; missed-call / IVR
- QR posters at rider hubs and labour chowks

7. CUSTOMER SEGMENTS

- Users: informal workers - delivery riders, domestic workers, construction and factory workers, small shopkeepers.
- Payers/partners: NGOs, CSR programmes, employers and gig platforms, state health departments.

EXISTING ALTERNATIVES

- Tele-MANAS 14416 (user must call first)
- English wellness apps; private therapy (costly)
- Silence or informal coping

HIGH-LEVEL CONCEPT

- Tele-MANAS's front door + a caring voice companion, built for workers that apps forgot.

EARLY ADOPTERS

- Hindi-speaking urban riders and domestic workers reached via one NGO partner

9. COST STRUCTURE

- Pilot: free tiers and open-source tools (hosting, Whisper, Hugging Face, FAISS).
- Later: clinical advisor review, language testing, WhatsApp/IVR messaging fees, secure hosting, outreach and training.
- Fixed: platform and compliance. Variable: per-message and speech usage.

10. REVENUE STREAMS

- CSR grants and NGO programme funding (workers use it free).
- Dashboard subscription for NGOs, employers and gig platforms.
- State health department or public-health contracts.
- Worker-facing app stays free by design.
